

In addition to AKD's core business activities, we now also offer a range of offshore services. AKD can provide a full suite of offshore services to cover most work-scopes associated with decommissioning (plant and equipment/ removal of platforms & structures)/offshore installation and commissioning, upgrades, refurbishment and repair work on any offshore installation in the world.

After several years of successfully supplying offshore services to the Southern North Sea (SNS) for AJS ONEgas, via a term contract. AKD then followed a natural progression into this field with Genesis/Tullow and landed a £1m+ project in 2008 for the tieback and modification of the top side of an unmanned SNS platform.

The work included the design and fabrication of the deck extension, the design and fabrication of the walkway, support structure and deck anchor plates. It also included the design for new and modified piping systems, new control and communication upgrades and also the installation works offshore. Attention was paid to ensure all HSE issues were accommodated with regards to installation works, and there were no lost time injuries to report.

Following this achievement, AKD were motivated to span further into this field, and following the completion of 2 smaller offshore contracts and proving their capabilities, AKD further secured in 2009 a multi million pound contract with AF Decom/Shell for the Inde field decommissioning. The workscope has already expanded and AKD are not only carrying out the offshore fabrication and installation to support the decommissioning of the platforms, but, are now also managing the electrical control systems, scaffolding, NDE inspection and heat treatment and are project managing the design of the emergency lighting.

offshore services

2

Overleaf is a good example of our broad range of services we can offer and our capabilities. Further support AKD can provide is as follows:

- Offshore Surveys
- Structural design and stress analysis
- Offshore Installation and Commissioning
- Decommissioning (Plant and equipment/removal of platforms & structures)
- Project Management
- Management and integration of Electrical Control systems
- Management and integration of Instrumentation systems
- Emergency & temporary power facilities
- Scaffolding & painting including rope access
- NDE inspections including rope access
- Onshore fabrication to support offshore services
- Interface support for offshore works
- Upgrades/Repair

However, the list is not exhaustive.

AKD Engineering are happy to discuss any issues and upcoming projects you may have and be given the chance to develop and offer efficient and cost effective innovative solutions to you. AKD have the facility to provide you with support worldwide to meet your project management, design and fabrication requirements onshore and offshore with personnel to support installation of any items you may require.
